

WE CLAIM:

1. A method for displaying information comprising:
 - generating a plurality of content modules, each content module comprising a subset of the content of a web site;
 - storing the content modules in a content module data directory;
 - maintaining a database of subject category identifiers, each subject category identifier corresponding to at least one content module in the content module data directory;
 - receiving a query from a user;
 - retrieving a plurality of URL's of web sites containing content pertaining to the query;
 - matching the query to at least one subject category identifier;
 - obtaining the at least one content module from the content module directory associated with the subject category identifier; and
 - displaying information relating to the plurality of retrieved web sites and information from said at least one content module on a display screen to the user.
2. A method according to claim 1 wherein said information is displayed on the first and second regions of the display screen in response to a single input from the user.
3. A method according to claim 1 wherein the content module directory comprises a data structure having nodes, and wherein each node is associated with one or more key numbers.
4. A method according to claim 1 wherein some of said content modules include functional devices.
5. A method for displaying information from the Internet comprising:
 - generating a plurality of content modules, each content module comprising a subset of the content of at least one web site;

storing the content modules in a content module data directory; receiving a query from a user;
assigning the query to at least one content module;
displaying on a first region of the user's display screen, a list of information relating to the plurality of retrieved web sites; and
displaying on a second region of said display screen, information from said at least one content module associated with the query.

6. A method according to claim 5 wherein said information is displayed on the first and second regions of the user's display screen in response to a single input from the user.

7. A method according to claim 5 wherein the content module directory comprises a data structure having nodes, and wherein each node is associated with one or more key numbers.

8. A method according to claim 5 wherein some of said content modules include functional devices.
